Objective

First-year Computer Engineering student at Georgia Tech with a strong foundation in Java and Python. Currently training in MATLAB/Simulink for autonomous vehicle development with the EcoCAR EV Challenge. Seeking a Summer 2026 internship to apply technical skills to real-world engineering challenges.

Education

Georgia Institute of Technology | Atlanta, GA *August 2025 – Present*
Bachelor of Science in Computer Engineering, GPA 3.38 Expected Graduation, May 2029

Skills

Programming: Java, Python
Software: VS Code, Microsoft 365, Windows
Languages: English (fluent), Spanish (beginner)

Experience

Geo Lab Drilling | Winder, Georgia *May – August 2025*
Operations & Systems Assistant

- Engineered a custom scheduling application from scratch using Microsoft PowerApps, currently utilized by 30+ employees
- Coordinated daily logistics and loading of 5+ specialized field trucks, ensuring on-time deployment
- Optimized warehouse organization and inventory of specialized drilling components reducing truck loading time

Barrow Arts and Sciences Academy | Winder, Georgia *August 2024 – May 2025*
AI & Simulation Developer Intern

- Developed a high-fidelity 3D simulation in Unreal Engine, implementing custom assets to enhance visual tools
- Engineered a customized GPT model for the Work-Based Learning department to assist students with career readiness
- Collaborated with faculty to integrate AI tools into the curriculum for 200+ program participants

Projects

EcoCAR EV Challenge *Spring 2026 - Present*
CAVs (Connected and Automated Vehicles) Subteam, Vertically Integrated Projects (VIP)
Goal: Contributing to the final year refinement of Level 2 autonomous systems for a 2023 Cadillac LYRIQ as part of a four-year national collegiate competition

- Developing longitudinal and lateral control algorithms for automated features using MATLAB and Simulink
- Assisting in using LiDAR, Radar, and camera data to improve object detection accuracy
- Collaborating with multidisciplinary subteams to optimize communication on Energy-Optimal path planning and safety

Relevant Coursework

Intro to Object-Oriented Programming Design and implementation of professional-grade applications using Java; focus on encapsulation, inheritance, polymorphism, and exception handling to create strong and reusable code

Activities

Independent Technical Development | Atlanta, GA *January 2026 - Present*
Self-Directed Linux Study

- Initiated self-led training in the Linux command-line environment to improve system navigation and shell scripting skills
- Acquired foundational knowledge in file system management, user permissions, and directory structures
